

I would to see the video relay service continue to be in function. I depend a lot on VRS which make my conversation with the hearing more smoother. All my family and friend like this service better than others where the hearing has to say GA each time, waiting on the line for the deaf to type witch take forever . If this service should stop then we Deaf might think that we are not considered as part of the society we will be limited to some communication access. Please hope you consider of giving us more access to communicate with the hearing.

Thanks
